Teacher guide

Hlasuj! by MiloslavHub · public guide

Prepare your lesson

Sign in to your teacher administration. Create a subject and a lecture. Add a question and answer choices. Select a correct answer for a quiz; a question without a correct answer is a poll.

Connect your students

Share the student link or add its QR code to your presentation. Students can use a phone, tablet or computer in a regular web browser. They need no student account and no application installation.

Try the link yourself before class. Use the student link for joining and the separate projection link for presenting.

Control the pace

1. Open your prepared lecture.
2. Let students join.
3. Start the question when you are ready.
4. Close voting and discuss the results.
5. Move to the next question.

Joining does not start live teaching. The teacher controls its start and end. Use test mode to rehearse before class.

Work with colleagues

Version 0.9.0 adds individual local teacher accounts and organisations. Use **Organisations and sharing** to select a teaching space and share content for collaboration or reading. Organisation administrators do not gain control of the whole website. Sign in with the local account supplied by your installation administrator; central login and live licensing are deferred. Choose Czech or English controls without translating your own question content.

Choose the right question

A quiz checks understanding. A poll gathers opinions, feedback or prompts discussion. A poll has no correct answer. Use timing and advanced options only when they support the learning goal.

Before class

- Check the question and its answers.
- Open the joining link and projection.
- Tell students when they may answer.
- Leave time to discuss the result.

Student guide

Hlasuj! by MiloslavHub · public guide

Join

Open your teacher's link or scan the QR code. Use a phone, tablet or computer with a regular browser. No student account or application installation is needed.

If the competition requires a nickname, follow your teacher's instructions. Avoid email addresses, student numbers and other personal details.

Answer

Wait until the teacher starts the question. Read it and choose your answer. The confirmation means your answer was accepted. If voting has already closed, wait for the teacher's next step.

Keep the same browser tab open for the next question. If you have trouble, check your connection and open the link again.

Results and privacy

Results follow the selected mode and your teacher's settings. A poll has no right or wrong answer. Joining the Hall of Fame and publishing a nickname are separate voluntary choices.

Read about your data and available choices at [Privacy and my data](#).

Troubleshooting

Use an up-to-date browser with JavaScript enabled. Check that you opened the student link. If the question has not started, you do not need to keep answering. Ask your teacher about an invalid or outdated link.

Administration and support

Hlasuj! by MiloslavHub · public overview

Before use

Agree on teacher access, a contact person and rules for handling results. Choose data retention appropriate to the purpose of teaching. Teachers should use their own accounts when the installation supports separate accounts.

Your installation

Detailed installation instructions are supplied in the customer package. Use the guide matching the actual installed version. Before an update, prepare a backup, verify restore and rehearse outside normal teaching. Contact the author for access to operational documentation.

Report an issue

Include the version, device, browser and time. Explain what you tried to do and what appeared. Do not send passwords, access credentials or personal student results.

Contact: hlasuj@miloslavhub.cz

Scope

Public guides describe everyday use. Installation, backup and authorized integration materials are supplied according to the relevant access.

Reference guide

Hlasuj! by MiloslavHub · public guide

Term	Meaning
Subject	A teaching context such as a course or seminar
Lecture	Ordered questions for a lesson
Question	Text and choices students answer
Quiz	A question with a correct answer
Poll	A question without a correct answer
Student link / QR	Joining a lesson
Projection	A screen for presenting to the group
Test mode	Rehearsing before class

Typical flow

Subject → lecture → question → join → start → results. The teacher controls live teaching. Students answer after a question opens. Student and projection links serve different purposes.

Content transfer

If your installation supports export and import, follow the customer-package guide. Check the preview and intended destination before importing. Content transfer does not automatically transfer teacher accounts or permissions.

Versions

Public guides are available in Czech and English. A guide's language does not determine the languages available in an older installation. Work in progress is not a released feature. Contact the author if unsure.

Brand, author and components

Hlasuj! by MiloslavHub · designed by a teacher for teachers.

© 2026 Miloslav Hub. Original text, graphics and branding identify their author. Retain authorship and provenance when sharing materials. The relevant licence documents govern further use and distribution.

The WordPress plugin declares GPL-2.0-or-later. QRCode.js declares MIT; notices and licence texts remain included. These licences do not automatically license the brand, original graphics or every other material. This guide does not grant rights to third-party logos.

Contact hlasuj@miloslavhub.cz about adapted marketing materials or use of the brand in another offer.

Engage your audience. Keep the lesson moving.

Hlasuj! by MiloslavHub · designed by a teacher for teachers.

Three steps

1. Prepare a question.
2. Add the QR to your presentation or share the link.
3. Start voting in class and discuss the results.

Why Hlasuj!

- Join quickly by QR or link.
- No installation or student accounts.
- A regular browser on a phone, tablet or computer.
- The teacher controls the start, end and pace.
- Quizzes for understanding and polls for discussion.
- Project results for the whole group.

Who is it for?

Teachers, lecturers and trainers who want to check understanding or start discussion. Use it in lectures, seminars and training sessions.
